

OPS-12 No CO₂ – Temp Correlation

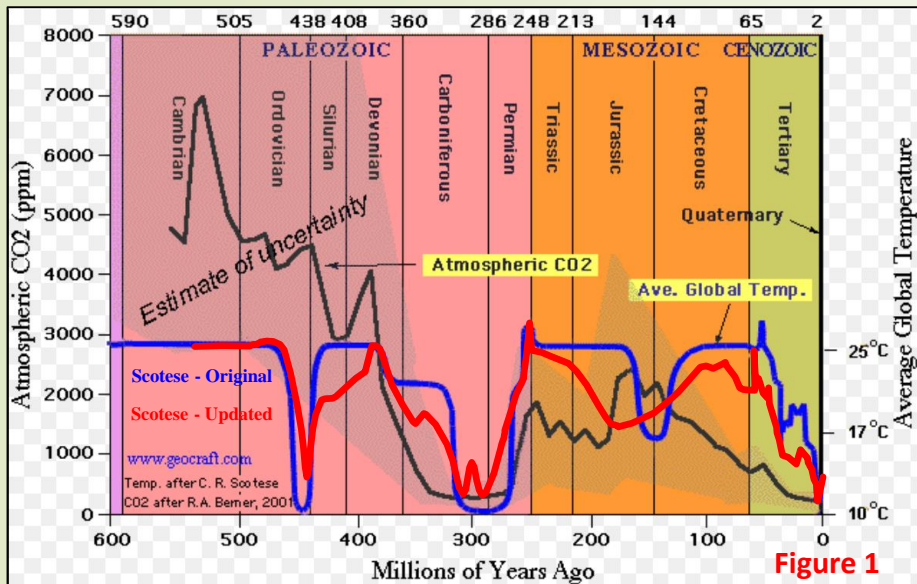

Figure 1

CO₂ – Temp Correlates (but Temp moves first)

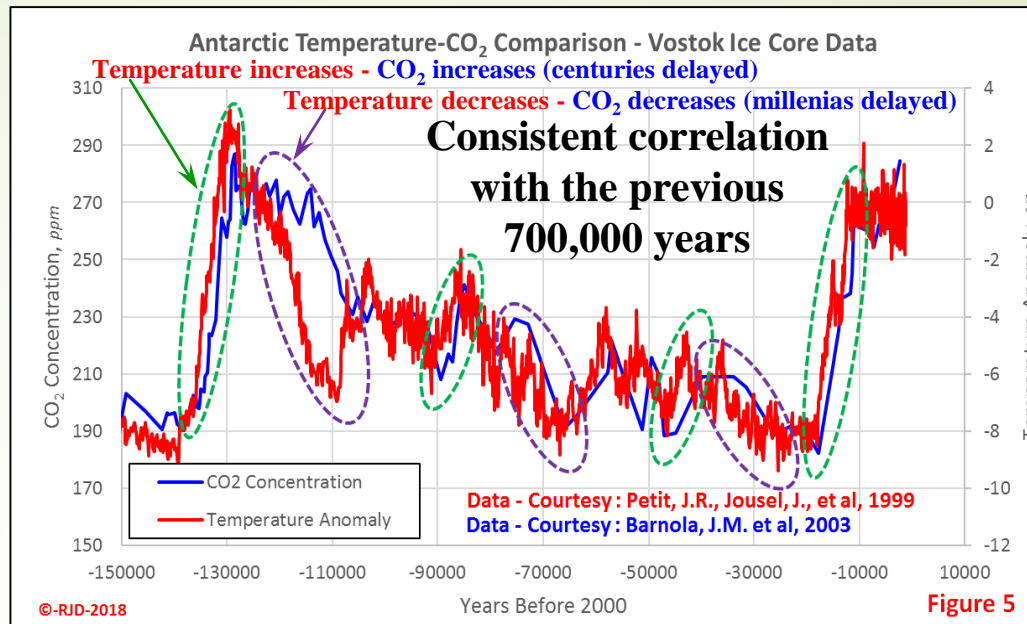

Figure 5

Over the last 600 million years, CO₂ probably played a significant (but not the only) role in global temperature rise for only a ~25 year period (1975-2000), where solar activity was flat and ocean cycles were trending up). In the modern record, CO₂ does not correlate to temperature before 1975 and after 2000.

Reverse CO₂ – Temp Correlation

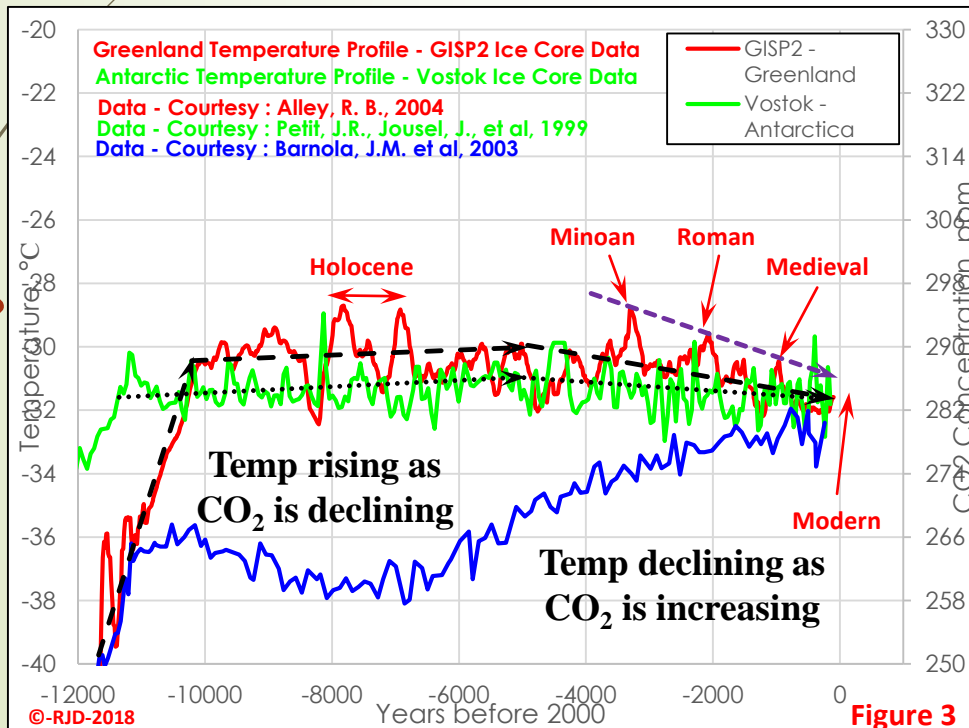

Figure 3

Minimal CO₂ – Temp Correlation

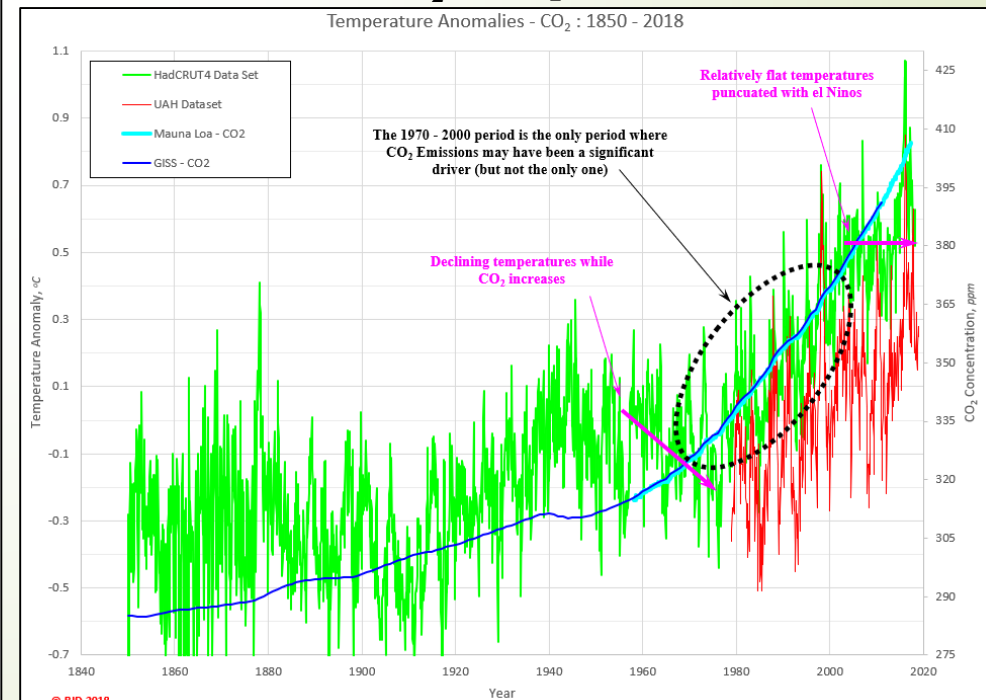

Figure 4

Very, very little evidence exists that CO₂ is a primary driver of Climate Change. In fact, the data showing CO₂ is a primary driver just doesn't exist statistically and computer models and theories are not proof.

Google "Ronald Davison climate"

Do CO₂-Temp Correlate??

Not in a fashion that shows CO₂ is a primary driver
