

First and foremost, computer models cannot be used as proof of any theory (“Climate Change” or not). Very simply Garbage In, Garbage Out (GIGO). Or more recently, Garbage In, Gospel Out.

The IPCC and the entire “Global Warming” Alarmist crowd insist that CO₂ (primarily) has caused the post industrial warming.

There is nothing natural or reality based about this heart.

This is the heart of the IPCC computer models!

A heart lacking both compassion and reason.

Global Warming Theory without empirical data is just that a theory. To believe otherwise is more religion than science!

Simplification
Computer Models

Temperatures rise due to CO₂.

Real World

CO₂ does not show up as a climate driver on any statistically significant time scale.

For 4 billion years, natural forces (primarily the sun (directly and indirectly)) have driven the climate.

And now suddenly CO₂ is the only parameter driving the global climate. Nature just doesn't work that way!!

The sun, (not CO₂) is the primary climate driver!

Computer Models
Real Simple

More Detail?
Google “Ronald Davison climate”.

Solar activity is poised to drop significantly (over the next few years). The IPCC models cannot and do not recognize that reality (a very real and existential threat). Your children should be coming temperature drops will be far more dangerous than the minor beneficial warming associated with CO₂.
