# OPS-34 Climate Change Puzzle

Volcanoes, aerosols, etc. also play "unsettled" roles.

More detail? [climatechangeandmusic.com](http://climatechangeandmusic.com)

This puzzle scenario is very representative of the "Climate Change" (CC) discussion. The Catastrophic Anthropogenic Global Warming (CAGW) alarmist crowd has focussed on CO<sub>2</sub> and built their story/narrative (appropriately a unicorn in this analogy) around that small radiative forcing (essentially ignoring the natural forcings (solar, clouds, oceans, etc.), refer to OPS-22).

Will we require magical Unicorn farts and Pixie Dust when the sun is not shining and the wind is not blowing?

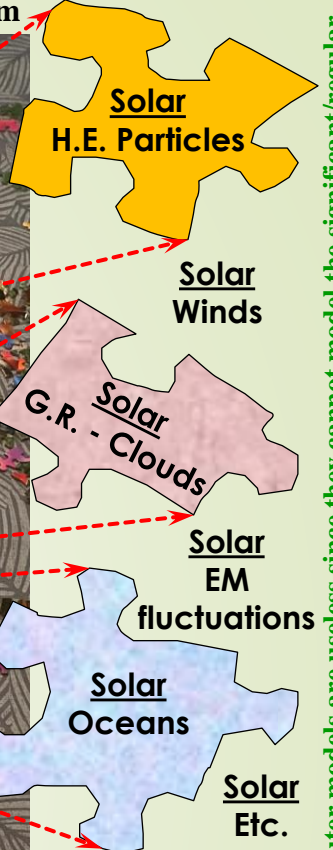

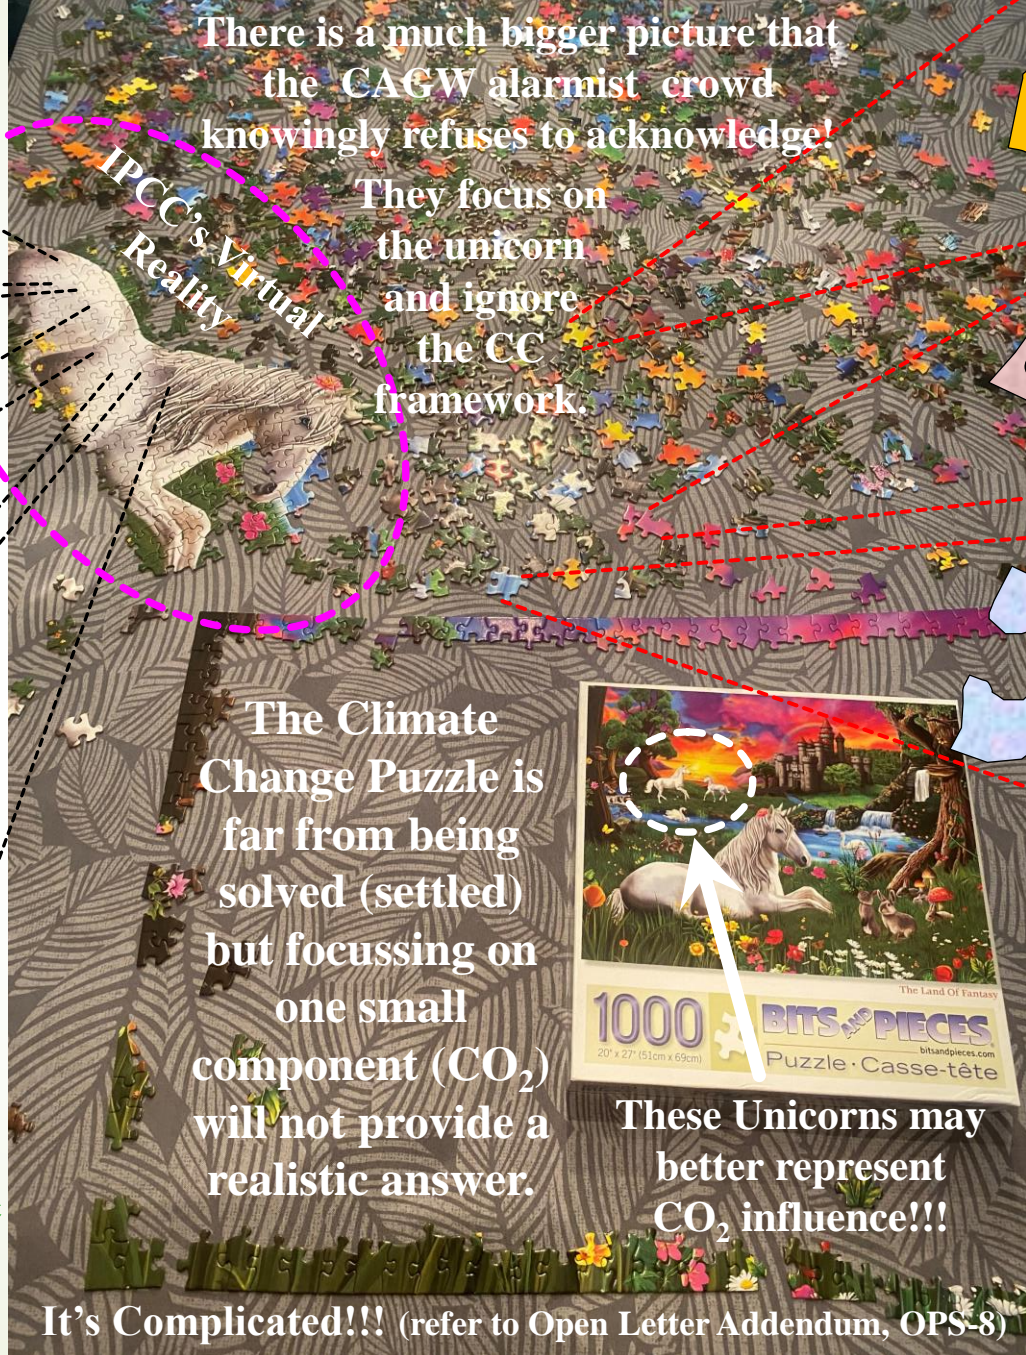

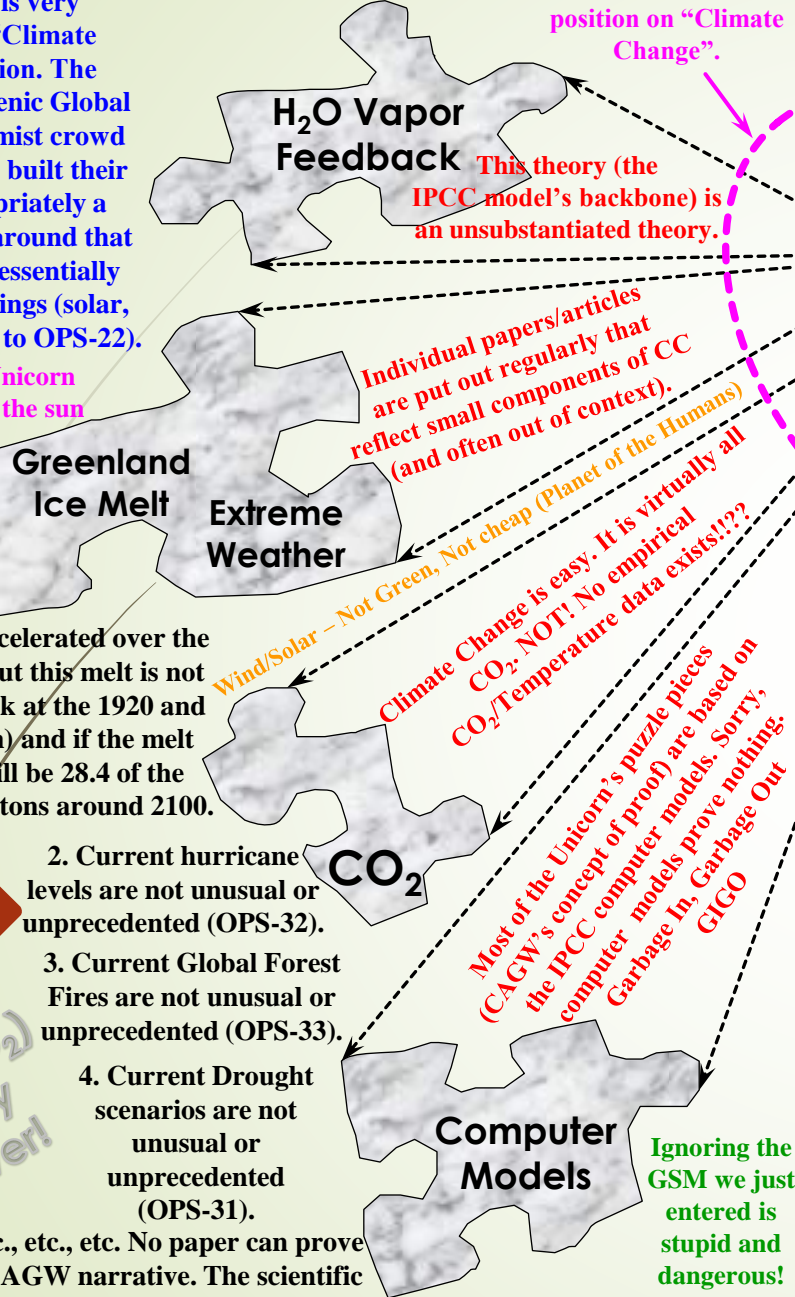

1. Greenland Ice Melt accelerated over the last couple of decades. But this melt is not unprecedented (look back at the 1920 and 30s, Holocene Optimum) and if the melt continues, there will still be 28.4 of the current 28.5 million Gigatons around 2100.

## Climate Change Analogy

The sun, (not CO<sub>2</sub>) is the primary climate driver!

- 2. Current hurricane levels are not unusual or unprecedented (OPS-32).
- 3. Current Global Forest Fires are not unusual or unprecedented (OPS-33).
- 4. Current Drought scenarios are not unusual or unprecedented (OPS-31).

5. Etc., etc., etc. No paper can prove the CAGW narrative. The scientific method requires empirical data. **Time to wake up, think for yourself!**

Natural forcings (solar and solar related (oceans, clouds, etc.) are essentially ignored by the IPCC modellers. The CMIP5 protocol was limited to Total Solar Irradiance (TSI, a small solar component). CMIP6 protocol has added in High Energy particles and cosmic rays but the modellers are still ignoring these available forcings.

The IPCC computer models are useless since they cannot model the significant/regular temperature fluctuations present throughout the Holocene. The natural forcings did not just disappear because the IPCC modellers have decreed it to be so.
