

Added Bonus - Delaying the green initiatives will also show how unnecessary they are!

OPPS-9 Common Sense

This post is for you Justin

More detail? climatechangeandmusic.com

We (Canadians specifically, but the world in general) are facing a serious threat as a direct consequence of the COVID-19 fallout. The virus will run its course and become an ugly historical footnote. Unfortunately, the financial and social damage from the lockdowns will last generations. Our debt, high before COVID-19 increased substantially over the last few months (OPPS-8) and will climb considerably more before we can begin the recovery.

And how are our political elite going to address the problem? I suspect our illustrious Prime Minister has moved off his “the budgets will balance themselves” position. Unfortunately, his government has already shown that they have no problem spending tax payer money exorbitantly fast and are more than willing to continue that unrealistic spending spree (to date with no concrete plan in place).

Here is where Common Sense comes into the picture!!!

Why is our Federal Government pursuing an uneconomic, unscientific and completely unrealistic green agenda at this point in our financial history? My bias may be showing in that question but that does not diminish the point I am going to make (using the Catastrophic Anthropogenic Global Warming (CAGW) alarmist crowds own “science”, OPS-17).

A real leader (hard to put JT in that category) would look at the “situation” and realize a time out would be the best course of action. Maybe put their ideological positions on the shelf for five maybe ten years and deal with the real problems affecting the citizens of their country right now (the people that voted for them). So let us lay out the “situation”.

Assuming the IPCC science is correct, what would the temperature drop difference amount to in the year 2100 if Canada’s contribution was deferred by 10 years. Guess what, that difference is negligible (less than **0.00035 °C**)!

Common Sense

It is time to #delaythegreen

The debt is a real problem that continues to grow and will worsen with rising interest rates!

The 1-2 trillion/year needed to drop the temperature by 0.17 °C is unjustifiable (that is less than the error estimates in the models).

Temperature Drop Estimates (using IPCC “science” and 2015 Paris Commitments)	2030 Commitments	2100 Commitments
	All 195 countries, All Pledges Honoured	0.048 °C
Canada’s Contribution (2%)	0.00096 °C	0.0034 °C
Delayed Canadian Contribution (2030-1/3)	0.00032 °C	
Delayed Canadian Contribution (2100-1/10)		0.00034 °C

And for those CAGW alarmists that believe that a 10 year delay would take us past the point of return (that new end of the world date that keeps getting delayed), I am still waiting for anyone (scientist or not) to provide an empirical CO₂/Temperature dataset that shows CO₂ driving the climate on any statistically significant historical time scale. A non-existent dataset that is required to move the CAGW narrative from a religious belief to a scientific principle.
