

GSM - Grand Solar Minimum. You really should do the Research!

# OPS-48 What Does 80+ Trillion Dollars Get You (in the IPCC's Virtual Reality)?

We are living through a financial mess. Spending on "GREEN" now will only exaggerate the financial problems with no measurable gains in the climate.

More info is available on my website (with links).

[climatechangeandmusic.com](http://climatechangeandmusic.com)

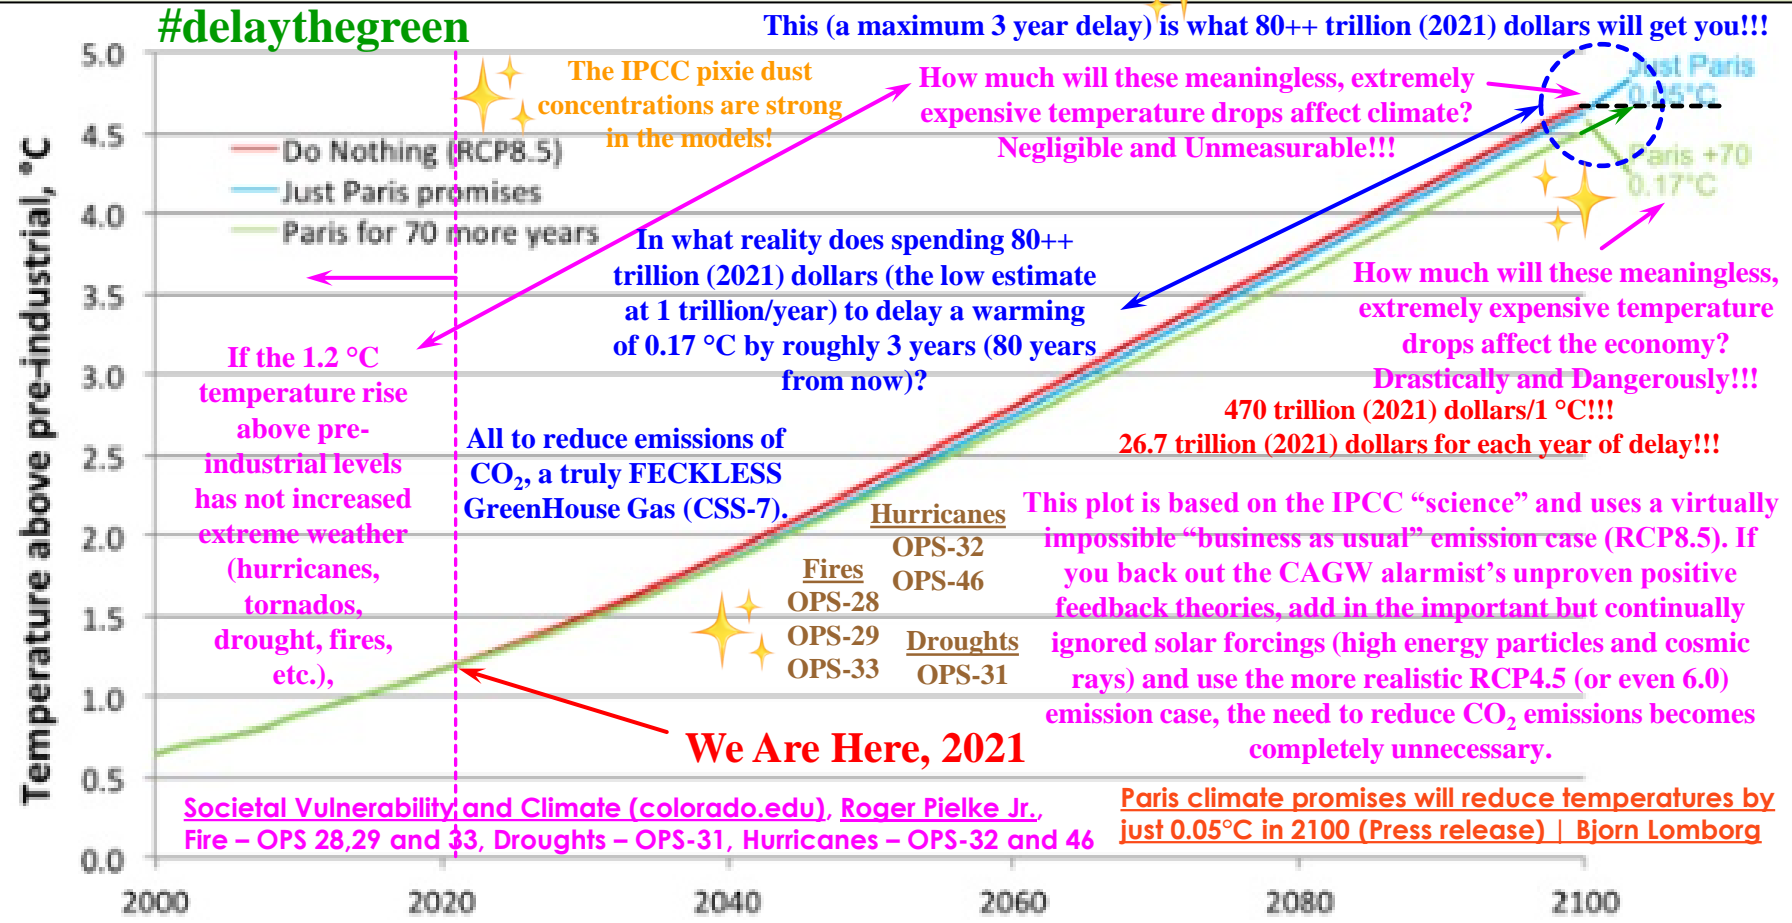

The IPCC Computer Models have done an absolutely abysmal job of forecasting the Lower Troposphere temperatures over the last 45 years. But we should trust them to forecast temperatures over the next 80 years? I don't think so!!! This plot was put together by Dr. John Christy (I reviewed his January 2021 presentation, CSS-6, for those interested).

The IPCC Computer Modelers continually refuse to include well established solar forcings (OPS-22, Computer Models - Real Simple). A very dangerous and criminal act in my opinion. Many will die unnecessarily in the GSM (due to inaction).

Adaptation NOT Mediation!

80+ Trillion \$ All Pain Minimal Gain

The sun, (not CO2) is the primary climate driver!

From the Hill, "CBO predicted that between 2020 and 2050, climate change will, on average, reduce GDP growth by 0.03 percentage points each year, culminating in the ultimate 1 percent decrease as of 2050."  
From World Atlas, "By 2050, the United States will be the second leading economic house after China with a GDP of \$34,102 billion USD." 1.37 %/year, low, but a higher GDP growth will not change the story.

The global temperature change from pre-industrial, for the Do Nothing (RCP8.5) scenario, for the global promises for Paris and for Paris extended for 70 more years, as

Think about that for a minute..... Does it make sense to spend 93 trillion (2021) dollars (i.e.: the US Green New Deal) to save 0.34 Trillion (2021) dollars in 2050 (or a total of 2.67 trillion over the 30 years). Not even close!!
