OPPS-17 The Hockey Stick Fix

a) Change in global surface temperature (decadal average) as reconstructed (1-2000) and observed (1850-2020)

This post reflects a major problem with the Climate Change discussion. The CAGW alarmist community routinely picks/modifies data to reflect their narrative (OPS-49 - Temperature Manipulation and OPS-53 - Cherry-Picking - CAGW Style). Visit my website to get a more complete/rounded picture of the data (climatechangeandmusic.com).

The Hockey Stick Fix

Historically, the Roman/Medieval Warm periods are well established warm periods, and the Dark and Little Ice Ages are well established cold periods.

The Hockey Stick Temperature Profile (a staple of earlier IPCC reports) was shown to be questionable a long time ago and disappeared for a while. The Schtick made a solitary experience in the recently released IPCC AR6 SPM Report (courtesy PAGES2K). As with the first schtick, this temperature reconstruction is built on tree ring data and has many of the same problems as the original schtick. As per IPCC modus operandi, that ignores the many other more accurate datasets that are available. Much like they ignore solar forcings, early data on forest fires, real trends in extreme weather, etc.
