 We'll know our disinformation program is complete when everything the American public believes is false.
 -William Casey
100% Fake Data

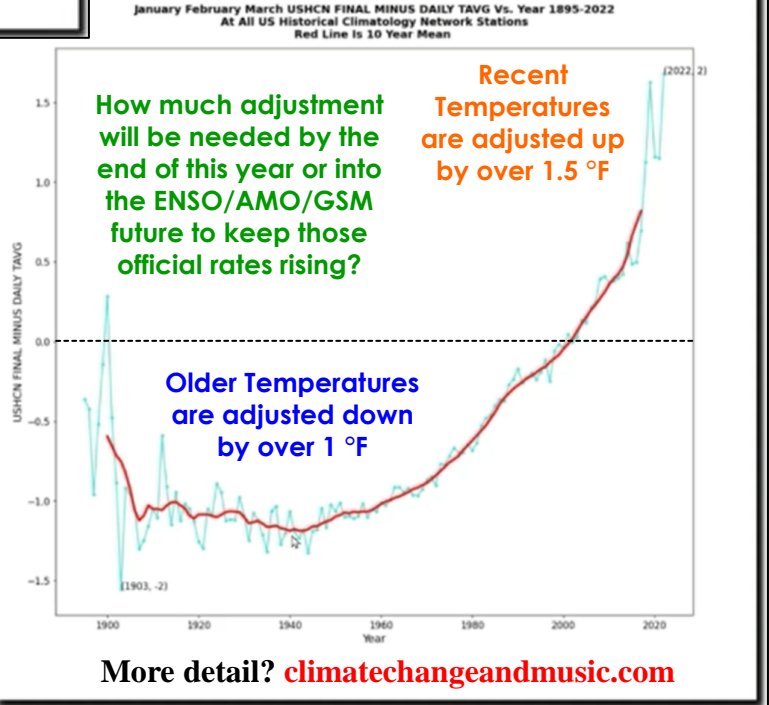

The chart to the left shows the percentage of average temperatures that are purely computer-generated. Over time many stations have been decommissioned and no longer provide measured temperatures. A value is derived (fabricated) for these “ghost” stations based on the temperatures at remaining stations around them. In 2021, roughly 50% of the temperatures used in the temperature average were computer generated. And as Tony Heller pointed out in his video, for the first three months of 2022, 100% of the temperatures are computer generated. Seriously!!! The potential for ideological manipulation is high at 50%. What are the chances of manipulation at a 100% fabrication rate? And this is all pre-homogenization!!!

The 10 year measured temperature mean curve from the graph above is superimposed on the adjusted graph to the right

Homogenization just adds a whole new level of data manipulation. The official temperature record looks nothing like the measured temperature record. Older measured temperatures have been reduced by over 1 °F and recent measured temperatures are being increased by over 1.5 °F (combined over 2.5 °F (1.4 °C)). Rather convenient changes for the Catastrophic Anthropogenic Global Warming (CAGW) alarmist narrative. Any chance that the IPCC’s official 1.07 °C temperature rise since the mid-1800s (the late stages of the Little Ice Age (LIA)) is due in part to data manipulation? Then you can ask the question, how much of that 1.07 °C rise is due to natural forcings since 86%+ of human emissions occurred post-1950? Does CO₂ contribute to warming? Yes, but there is a lot more to the climate story than just the very minor, beneficial CO₂ warming (CSS-7, OPS-55).

Note, the yearly data is even more pronounced evidence of data manipulation. This data covers only the first 3 months of the year (January, February and March (J-F-M)). That yearly data can be found on Tony Heller’s website (<https://realclimatescience.com>).
