

Reviewing Elon Musk and His Position on the “Climate Crisis” – Overview

<https://climatechangemusic.com/reviewing-elon-musk-and-his-position-on-the-climate-crisis-2/>

The young son of a friend asked me what I thought of Elon Musk’s recent video on the Climate Crisis. After watching the video “[What is needed to address the climate crisis](#)”, I realized I had a lot of thoughts on Elon’s position and decided to put them down in print and share them with those that are willing to listen and can think for themselves. The quick summary, a pure propaganda piece, devoid of any real scientific data or perspective. Quite disappointing coming from a person of Elon’s stature and knowledge. He knows how the Scientific Method works and has chosen to ignore those principles as they apply to “Climate Science”. While he has taken some commendable positions on many of the problems facing our society, his position on “Climate Change” shows he still has significant ties to the globalist agenda and casts some doubt on his commitment to those commendable positions.

A PDF version, along with full size images and detailed links is available at the links at the beginning and end of this post.

But to be clear, I am not surprised by his “Climate Change” position given his obvious conflicts of interest (EVs, batteries, etc.). He has benefited immensely from the “Green” movement and will suffer some economic pain when the voters/taxpayers wake up to the extremely dangerous, unnecessary economic and technical realities of NetZero, ESG, “Climate Change”, etc. Sadly, I am also not surprised that the world’s richest man has succumbed to a basic human trait like greed. I hope he eventually acknowledges what he already knows. His condemnation of the world’s elite (the UN, WEF, etc.), is meaningless if he still supports the “climate change” ideological narrative (i.e.: all CO₂, all the time, the most important tool in the Global Government toolbox).

This discussion is by no means all encompassing and is designed to address the video specifically. Specific points in the discussion are augmented with links that provide more detailed analysis and information. I do provide my opinion (which is my right), based simply on the data presented. That data has been downloaded from NASA, NOAA, and a wide variety of “respected” academic and scientific institutions from around the world. I am open to and welcome any new empirical data that might change my position. Different, informed opinions on that data are always welcome. My analyses are based primarily on empirical data. The opinions of a Michael Mann (alarmist) or a Richard Lindtzen (realist) are relatively meaningless without the empirical data (all of it) to back their positions up. My personal website covers significantly more of the climate change discussion (focused primarily on empirical data) than just the Elon Musk position.
